1 Matlab Help on cputime

```
CPUTIME CPU time in seconds.
    CPUTIME returns the CPU time in seconds that has been used
    by the MATLAB process since MATLAB started.

    For example:

        t=cputime; your_operation; cputime-t

    returns the cpu time used to run your_operation.

    The return value may overflow the internal representation
    and wrap around.

    See also etime, tic, toc, clock
