4. Chapter: Anatomy & Physiology Final

1. Anatomy & Physiology Final Questions

4.1.1. The connective tissue covering that encloses the sarcolemma of an i...

Author: Joli Julianna

The connective tissue covering that encloses the sarcolemma of an individual muscle fiber is called the

Please choose only one answer:

- epimysium
- perimysium
- endomysium
- periosteum

Check the answer of this question online at QuizOver.com:

Question: [The connective tissue covering that encloses the Joli Julianna AP](#)

Flashcards:

<http://www.quizover.com/flashcards/question-the-connective-tissue-covering-that-encloses-the-joli-juliann?pdf=1505>

Interactive Question:

<http://www.quizover.com/question/question-the-connective-tissue-covering-that-encloses-the-joli-juliann?pdf=1505>

4.1.2. A fascicle is a

Author: Joli Julianna

A fascicle is a

Please choose only one answer:

- muscle
- bundle of muscle fibers enclosed by a connective tissue sheath
- bundle of myofibrils
- group of myofilaments

Check the answer of this question online at QuizOver.com:

Question: [A fascicle is a Joli Julianna AP Quest](#)

Flashcards:

4.1.4. The function of the T tubules in muscle contraction is to

Author: Joli Julianna

The function of the T tubules in muscle contraction is to

Please choose only one answer:

- make and store glycogen
- release Ca^{2+} into the cell interior and then pick it up again
- transmit the action potential deep into the muscle cells
- form proteins

Check the answer of this question online at QuizOver.com:

Question: [The function of the T tubules in muscle contraction Joli Julianna](#)

4.1.5. The sites where the motor nerve impulse is transmitted from the ner...

Author: Joli Julianna

The sites where the motor nerve impulse is transmitted from the nerve endings to the skeletal muscle cell membranes are

Please choose only one answer:

- neuromuscular junctions
- sacromeres
- myofilaments
- z discs

Check the answer of this question online at QuizOver.com:

Question: [The sites where the motor nerve impulse is Joli Julianna AP Quest](#)

4.1.20. Assume that an EPSP is being generated on the dendritic membrane. Wh...

Author: Joli Julianna

Assume that an EPSP is being generated on the dendritic membrane. Which will occur?

Please choose only one answer:

- specific Na⁺ channels will open
- specific K⁺ channels will open
- a single type of channel will open permitting simultaneous flow of Na⁺ and K⁺
- Na⁺ channels will open first and then close as K⁺ channels open

Check the answer of this question online at QuizOver.com:

Question: [Assume that an EPSP is being generated on the Joli Julianna AP Quest](#)

4.1.22. Chemical synapses are characterized by all of the following except

Author: Joli Julianna

Chemical synapses are characterized by all of the following except

Please choose only one answer:

- the release of neurotransmitter by the presynaptic membranes
- postsynaptic membranes bearing receptors that bind neurotransmitter
- ions flowing through protein channels from the presynaptic to the postsynaptic neuron
- a fluid filled gap separating the neurons

Check the answer of this question online at QuizOver.com:

4.1.25. Inhibition of acetylcholinesterase by poisoning blocks neurotransmi...

Author: Joli Julianna

Inhibition of acetylcholinesterase by poisoning blocks neurotransmission at the neuromuscular junction because

Please choose only one answer:

- ACh is no longer released by the presynaptic terminal
- ACh synthesis in the presynaptic terminal is blocked
- ACh is not degraded, hence prolonged depolarization is enforced on the postsynaptic cell
- ACh is blocked from attaching to the postsynaptic ACh receptors.

Check the answer of this question online at QuizOver.com:

Question: [Inhibition of acetylcholinesterase by poisoning Joli Julianna AP](#)

4.1.27. An IPSP is inhibitory because

Author: Joli Julianna

An IPSP is inhibitory because

Please choose only one answer:

- it hyper polarizes the postsynaptic membrane
- it reduces the amount of neurotransmitter released by the presynaptic terminal
- it prevent calcium ion entry into the presynaptic terminal
- it changes the threshold of the neuron

Check the answer of this question online at QuizOver.com:
